

Parcel Delivery & E-commerce Logistics

Durable, Reusable for Large-Scale Parcel Networks

Industry

Parcel Delivery & E-commerce Logistics – United Kingdom.

Customer Profile

One of the UK's largest dedicated parcel delivery operators, handling hundreds of millions of parcels annually through an extensive network of couriers, parcel shops, and lockers. The organisation focuses on cost-efficient, high-volume delivery while actively reducing the environmental impact of its operations.

The Challenge

The customer required a robust transport solution capable of protecting parcels during intensive handling and transport. At the same time, they aimed to reduce single-use packaging and optimise vehicle and storage space across their network.

The Solution

LC Packaging supplied a FlexiBox-based parcel transport solution, designed for strength, durability, and repeated use. The foldable construction allows the containers to collapse when empty, significantly reducing return transport volume and storage requirements.

The Result

Following successful trials, the reusable solution was approved for wider rollout. FlexiBox now supports daily parcel transport, helping improve efficiency while supporting sustainability objectives.

Key Benefits

- Strong protection for high parcel volumes
- Foldable design optimising return logistics
- Reduced single-use packaging
- Durable, reusable solution for intensive use

Why FlexiBox

FlexiBox offers parcel networks a reliable, space-efficient, and sustainable alternative to conventional transport packaging.
