Africa's leading packaging expert in sustainable FIBC solutions

lc packaging®

LC Packaging is a family business that has been active in the packaging industry for four generations. The company started serving the industry in 1923 and has expanded considerably over the years. Today we are a leading global company with own manufacturing locations in Europe, Asia and Africa, and have over 1,000 employees: we are a leading expert in FIBC solutions.

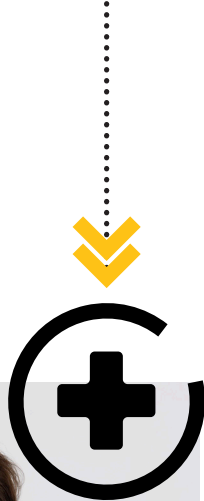

Committed

Reliable

Loyal

***“We strongly believe
in the African region
and have defined it as a
strategic market for LC
Packaging”***

Dear reader,
LC Packaging is a family business that has been active in the packaging industry for four generations. What started as a jute bag importer and trader in 1923, has evolved to a full service manufacturer and distributor and one of the world's largest packaging experts in the field of Flexible Intermediate Bulk Containers, also known as FIBCs, big bags and bulk bags.

LC Packaging has offices, warehouses and production locations in 16 countries in Europe, Asia and Africa, own certified production locations and dedicated production partners.

We have regional offices with warehousing facilities in

Johannesburg, Abidjan, Ndola and Sint-Katelijne-Waver (Belgium) serving 24 African countries. This, combined with our global network and local service makes us always able to respond to your individual packaging needs, anytime and anywhere.

LC Packaging started developing the African market in 2010. It has since then become the leading supplier of FIBC's in the mining, food and chemical sectors in Africa. We have a strong belief in the positive outlook for Africa and have defined it as a strategic market for our company.

LC Packaging is committed to being your long-term partner in sustainable packaging solutions, for every product and every industry. From bags suited for mining, construction, form stable and ventilated bags to food safe, pharma clean, UN and electro-static FIBCs: Our motto is to keep your industry going.

At LC Packaging we guarantee our customers consistent high quality solutions. Meaning much more than just the strength of our packaging and our comprehensive portfolio of certificates: It is the package as a whole.

It is in the quality materials we use and the state-of-the-art production process, the quality of transport and storage and in the service we provide, the working conditions in which our FIBCs are produced and sustainable practices when it comes to reducing our environmental footprint.

Thank you for your interest in our company. We are looking forward to a sustainable and successful partnership.

Yours faithfully,

Director Industrial Packaging
Marcel Schouten

Approach

Always near

We are the fastest growing FIBC supplier with offices, own production facilities and storage locations in 16 countries in Europe, Africa and Asia. We have regional offices with warehousing facilities in Johannesburg, Abidjan, Ndola and Sint-Katelijne-Waver (Belgium). This, combined with our global network and local service makes us always able to respond to your individual packaging needs, anytime and anywhere in the following African countries:

Leading since 1923

Experience our inspiring mixture of the tradition of a family business and the fast and flexible support of an energised and specialised organisation. We are a proven solid and reliable business partner, with a strong and healthy financial performance.

Innovative approach

We continuously invest in our infrastructure to meet and improve our customer experience. Our systems allow real-time insight in your inventory and annual usage, which can help you optimise your logistical planning.

Own production

With own production and dedicated production partners we have full control of the production of our extensive product portfolio. It allows us to be flexible and offer tailor-made solutions according to our own high standards and personal quality control.

Quality in Packaging

With a dedicated quality department we offer quality excellence and compliance with a comprehensive portfolio of required quality standards and focus on extended and improved standards throughout the chain.

Solid sustainability policy

Our Vision

LC Packaging strives to include all stakeholders in its quest to provide sustainable packaging solutions, while minimising the impact on the environment, the waste of valuable products while also enriching the communities in which we operate.

We take our responsibility for more sustainability throughout the entire chain seriously, and support you in achieving your sustainability goals and gain higher competitive advantage. In our sustainable business strategy, LC Packaging has identified four areas of commitments. We believe by integrating these areas in our daily business agenda, we will improve our environmental, economic and social impact, while making a profit along the way.

Long-term partnership

Our company is about transparency and trust, and we focus on long-term, mutually beneficial partnerships with our employees, our production partners and our customers.

Best people

Our people are all over the world, and we consider them our greatest asset. Our experts fully understand the importance of your business, are committed to quality and are dedicated to offering you the best solution.

Our broad range of FIBCs

Food safe & Pharma clean

LC Packaging's food safe and pharma clean FIBCs include our innovative Food Safe and Pharma Clean Program for cleaner, safer and sustainable premium packaging for food and pharmaceutical ingredients and products.

Electro-static Type C

Our electro-static Type C FIBCs are specially designed for electro-static applications and meet the requirements of IEC 61340-4-4 norm. Type C FIBCs offer safety during the filling and discharging in flammable gas, vapor or dust atmospheres.

Electro-static Type D

Next to Type C, we also design, test, produce and deliver electro-static FIBCs Type D. Based on the ATEX Dust zones 20-22 and the MIE level of the product we can determine which FIBC classification meets your requirements.

Q bags (formstable)

Our Q bags are form-stable FIBCs fitted with an internal baffle structure. Baffles ensure the Q bag stays within the pallet dimensions and guarantees an optimum load for any type of transport.

Mining bags

Our high quality FIBCs are suitable for heavy use and offer safe, solid and effortless filling, discharging, storage and transportation of mining products, whilst preserving the mineral quality and avoid contamination.

1-2 point lift FIBCs

Perfect for relatively low packaging weights of 500 to 1000 kg and in situations where filling speed is crucial. Our 1-2 point lift big bags are mostly used on semi-automatic or fully automatic filling lines.

The industries we serve

UN FIBCs

UN FIBCs are certified for the transportation of hazardous goods under ADR regulations. Our UN bags are tested and designed to comply with all the requirements of a UN FIBC.

Ventilated big bags

Our ventilated bags are breathable and very strong for improved product preservation. Ideal for potatoes, carrots, onions, cacao beans, woodlog, nuts, etc.

FIBC liners

Liners provide additional protection against air and water vapour migration and the effect of light. Liners are available in LDPE, LLDPE, MDPE and HDPE.

More

We design, produce, and test every type of FIBC to make sure we deliver a packaging solution that fully meets your individual processes and technical specification demands.

Our FIBC experts are available to conduct on-site technical evaluation to help you find the right FIBC and achieve an optimal level of operational and cost efficiency.
